*This published book is wonderful. It is really simplified but unexpected situations within the fifty percent of the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.*

Then the square on A F is equal to the square on A B. PROBLEM XI. --To describe a circle equal in area to the sum of two given circles. PROBLEM XII. --To describe a circle equal in area to the difference between two given circles. Take c E equal to the diameter of the greater circle, and on it describe the semicircle c f E. From c with c D (the diameter of the less circle) as radius, cut the semicircle in f. Join E F. Then E F is the diameter of the required circle. As in the last case any figure can be constructed equal in area to the difference between two similar figures. PROBLEM XIII. --To construct a triangle proportional in area to a given triangle. PROBLEM XIV. --To construct a triangle proportional in area to a given triangle, and similar to it. PROBLEM XV. --To construct a triangle having given the area and ratio of the sides. Area to 1 square inches: sides to be: 5: 6: 7. Take any straight line a b, and set off in it (567) equal parts, so that A C may be equal to five, c D to six, and D B to seven parts.
